

SERIES RW

AC/DC CONVERTERS

The “-R” (**Ruggedized**) Version of the A Series is the same as the Standard version except it uses industrial grade plastic cased TO-220 type diodes and transistors in place of metal ones for cost savings. All other components including the control IC and the input capacitors are identical. The “-R” version has MTBF numbers 5-10% lower than the Standard version (per Mil-HDBK-217). No dimensions or electrical specifications will be changed. The operating temperature range remains at -55 to 100°C. The internal EMI filter is optional.

Refer to AW Series manual for detail specifications.
